

For Immediate Release: December 2024

## Factory Team Titanium option parts for RC8B4.1, RC8B4.1e, RC8T4, and RC8T4e

(Pictured: #81671, #81670, #81669 Titanium option parts for RC8B4.1, RC8B4.1e, RC8T4, and RC8T4e)

Factory Team is pleased to announce the release of titanium upgrade parts for the RC8B4.1 and RC8T4 platforms. These products reduce the overall weight of your vehicle while retaining overall strength in harsh conditions. No additional hardware is needed for installation. These parts also boast a great appearance with a machined titanium finish.

The shock pins have been designed with threads and a 5.5mm hex to allow for easy threading into the suspension arms. The package comes with two right-hand threaded pins and two left-hand threaded pins. The left-hand threaded pins are denoted with an "L" inscribed on the head. Proper installation is achieved by always putting the left-hand threaded pins on the front right and rear left.

## Cumulative weight reductions:

- Shock pins are 2 grams lighter than kit steel
- Brake cams are 3.3 grams lighter than kit steel
- Steering posts are 6 grams lighter than kit steel

UPC	Part No.	Description	MAP	MSRP	Origin	Available
