Thank you for purchasing this Team Associated product. This assembly manual contains instructions and tips for building and maintaining your new RC10 B64.

Please take a moment to read through this manual to help familiarize yourself with these steps.

We are continually changing and improving our designs; therefore, actual parts may appear slightly different than in the illustrations. New parts will be noted on supplementary sheets located in the appropriate parts bags. Check each bag for these sheets before you start to build.

It all started with a 1-2-3 sweep. In 2007, the RC10B44 swept the podium at the I.F.M.A.R. World Championships. Since then, Team Associated’s first 1:10 scale 4WD buggy has held a dominant place at the front of the field. The B44 platform has gone on to win numerous National and International titles and added two more I.F.M.A.R. World Championships to its legacy in 2011 and 2013.

Speed, grip and durability. Designed to take advantage of today’s faster-than-ever tracks, the RC10B64 Team Kit offers increased durability, all new suspension geometry, a wider tuning window, improved weight distribution, and easy maintenance. Excelling on dirt and clay surfaces, the B64’s adjustable axle height and roll centers result in a stable yet nimble platform. The new center slipper clutch allows for later breaking and enhanced on power acceleration out of the corners.

Additional RC10B64 Team Kit Features:

- V2 12mm “Big Bore” threaded aluminum shocks with 3mm TiN coated shafts and low friction x-rings for improved smoothness
- Factory Team floating aluminum motor mount and aluminum/carbon servo mounts
- Refined arm mount geometry with quick and easy tuning
- Front and rear anti-roll bars keep chassis flat for increased corner speed
- Narrow, 7075 hard-anodized aluminum chassis with centralized mass. Easy access center slipper clutch
- Strengthened front and rear suspension with hard-anodized aluminum caster blocks and carbon fiber shock towers
- Team Associated clear body and screw-mounted wing by JConcepts™
- All-metric hardware throughout

### Notes

This symbol indicates a special note or instruction in the manual.

This symbol indicates a Racers Tip.

There is a 1:1 hardware foldout page in the front of the manual. To check the size of a part, line up your hardware with the correct drawing until you find the exact size. Each part in the foldout has a number assigned to it for ordering replacement parts.

Notes

Painting Tips:
Your B64 comes with a clear polycarbonate body. You will need to prep the body before you can paint it. Wash the inside thoroughly with warm water and liquid detergent. Dry the body using a clean, soft, lint-free cloth. Use the supplied window masks to cover the windows from the inside of the body (RC cars get painted from the inside). Using high-quality masking tape, apply tape to the inside of the body to create a design. Spray (either rattle can or airbrush) the paint to the inside of the body (preferably dark colors first, lighter colors last).

NOTE: use ONLY paint that is recommended for use with polycarbonate plastics. If you don’t, you can destroy the plastic body!!!!

After painting, cut the body along the trim lines. Make sure to drill or use a body reamer to make the holes for the body mounts and antenna!

Set The Gear Mesh:
You should be able to rock the spur gear back and forth in the teeth of the pinion gear without making the pinion gear move. If the spur gear mesh is tight, then loosen the #31532 screws and move the motor away, then try again. A gear mesh that is too tight or too loose will reduce power and damage the gear teeth.

Motor Gearing:
Proper motor gearing will result in maximum performance and run time while reducing the chance of overheating and premature motor failure. The gear ratio chart lists recommended starting gear ratios for the most widely used motor types. Gear ratios will vary depending upon motor brand, wind, and electronic speed control. Consult your motor and electronic speed control manufacturers for more information. Team Associated is not responsible for motor damage due to improper gearing.
