

RC8 B3.1e TEAM KIT

ProLine® "Predator" body included

H.T.C. (High Torque Capacity) differentials with increased fluid capacity and a more consistent feel lap after lap

94mm CVA driveshafts increase traction and chassis support

Two-piece sliding motor mount for easy gear mesh adjustment and motor removal

Enclosed receiver box

Suspension arms have been updated to modern race specs

16mm Big Bore 6061 aluminum shock bodies and bleeder-style caps, with new 20mm I.D. springs

Easily accessible front and rear differentials

Prototype shown. RC8B3.1e Team Kit shown equipped with items NOT included in the kit: Reedy motor, battery, ESC, servo, XP receiver, wheels, tires, and pinion gear. Body comes clear. Assembly and painting required. Due to ongoing R&D, photos may not match final product.

For Immediate Release: March 27, 2017

NEW! RC8B3.1e Electric Team Kit

1:8 Scale Electric 4WD Off Road Competition Buggy Kit

Team Associated has taken the same performance engineering and developed found in the RC8B3.1 nitro buggy and used that data to create the new brushless-powered RC8B3.1e Team Kit!

Answering the demands of the fastest-growing 1:8 scale e-buggy racing class, the RC8B3.1e Team Kit was designed specifically for brushless power. Features include new H.T.C. (High Torque Capacity) differentials with increased fluid capacity and a more consistent feel lap after lap, precision CVA drive shafts front and rear to keep suspension travel free through the entire stroke, and a unique, proprietary, hard-anodized 7075-T6 aluminum chassis ingeniously designed for optimum weight distribution and superior handling!

Cross-class chassis compatibility. Knowing that racers would be competing in both 1:8 nitro and electric at the same events, the RC8B3.1e was designed to handle and respond to changes just like the RC8B3.1. This similar handling characteristic gives the racer a huge advantage, as tuning changes can be applied to both buggies seamlessly.

All of these improvements lead to a car that is easier to drive, more consistent lap after lap, and suits a wider variety of tracks.

Designed to handle, built to win. The RC8B3.1e Team Kit was designed to give the dedicated electric 1:8 racer the highest level of performance that will help take your racing program to the next level.

UPC: 784695 809369	#80936	RC8B3.1e Team Kit	MAP: \$549.99	MSRP: \$829.99	Available: May 2017

Features of the RC8B3.1e Team Kit

- H.T.C. (High Torque Capacity) differentials offer increased fluid capacity and a more consistent feel lap after lap
- 94mm CVA driveshafts increase traction and chassis support
- Suspension arms have been updated to modern race specs
- Anti-roll linkage curves have been altered to provide more chassis support throughout the suspension travel
- All suspension arm pivots have been revised for more ground clearance, resulting in better jumping and landing while also improving durability
- 16mm Big Bore 6061 aluminum shock bodies with bleeder style caps
- New shock springs (20mm I.D.)
- Highly efficient drivetrain utilizes straight-cut gears to provide great acceleration and increased run time
- Hard-anodized 7075 aluminum chassis with keyed lower suspension plates
- Enclosed receiver box
- Full Factory Team rubber-sealed ball bearings
- Easily accessible front and rear differentials
- Pro-Line® "Predator" body included
- Two-piece sliding motor mount for easy gear mesh adjustment and motor removal
- RC8B3.1e shares 90% parts compatibility with the RC8B3.1 nitro buggy, offering the perfect solution for multi-class racers

RC10B3.1e Team Kit Specifications

Scale	1:8
Power	Electric
Length	488mm / 19.21"
Width	*Varies
Weight	*Varies
Wheelbase	327.5mm / 12.89"
Drive	4WD

**Actual width and weight will vary depending on the engine, exhaust, electronics, wheels and tires used in the finished kit.*

Prototype shown. RC8B3.1e Team Kit shown equipped with items NOT included in the kit: Reedy motor, battery, ESC, servo, XP receiver, wheels, tires, and pinion gear. Body comes clear. Assembly and painting required. Due to ongoing R&D, photos may not match final product.
