

RCB3.1e TEAM KIT

1:8 Scale Electric 4WD Off Road Competition Buggy Kit Manual & Catalog

#80936 RC8B3.1e Team Kit

TEAM ASSOCIATED

Designed in California, USA

:: Introduction

Thank you for purchasing this Team Associated product. This assembly manual contains instructions and tips for building and maintaining your new RC8B3.1e Kit. Please take a moment to read through this manual to help familiarize yourself with these steps. We are continually changing and improving our designs; therefore, actual parts may appear slightly different than in the illustrations. New parts will be noted on supplementary sheets located in the appropriate parts bags. Check each bag for these sheets before you start to build.

:: RC8B3.1e Team Kit Features

- New differentials offer increased fluid capacity and more consistent feel lap after lap.
- 94mm CVA driveshafts increase traction and chassis support.
- Suspension arms have been updated to 2016 race specs.
- Swaybar linkage curves have been altered to provide more chassis support throughout the suspension travel.
- All suspension arm pivots have been revised for more ground clearance resulting in better jumping and landing while also improving durability.
- 16mm Big Bore 6061 aluminum shock bodies and caps with bleeder style caps.
- Shock springs are now compatible with other brands (20mm I.D.).
- Highly efficient drivetrain utilizes straight cut gears to provide great acceleration and run-time.
- Hard-anodized 7075 aluminum chassis with keyed lower suspension plates.
- Proline® "Predator" body included.
- Enclosed receiver box .
- Full Factory Team rubber-sealed ball bearings.
- Easily accessible front and rear differentials.
- Two-piece sliding motor mount for easy gear mesh adjustment and motor removal.
- RC8B3.1e shares 90% parts compatibility with the RC8B3.1 nitro buggy, offering the perfect solution for multi-class racers.

:: Additional

Your new RC8B3.1e Kit comes as a kit. There are some items you will need to complete your kit (refer to catalog for suggestions):

- 2 channel radio/transmitter set with switch – FM/PCM/2.4GHz recommended
- Transmitter batteries (#302 recommended)
- Steering servo (#29133, 29134, 29166, 29167, 29168, 27100, 27101 recommended)
- 14.8v LiPo battery pack (#311, 318, 756, 757 recommended)
- Quick charger (#616, 27200 recommended)
- 1/8 scale specific electronic speed control
- 1/8 scale specific electric motor (#988, 989, 993 recommended)
- 1/8th scale buggy tires
- CA (Cyanoacrylic) glue (#1597 recommended)
- Polycarbonate specific spray paint or polycarbonate specific bottled paint and airbrush
- Thread locking compound (#1596 recommended)
- Needle nose pliers
- Shock shaft pliers (#1675 recommended)
- Hobby knife
- Reamer/hole punch
- Ride height gauge (#1449 recommended)

:: Other Helpful Items

- Silicone Shock/Diff Fluids (Refer to catalog for complete listings)
- Body Scissors (AE #1737)
- FT Turnbuckle Wrench (AE #1114)
- Soldering Iron
- Wire Cutters
- FT Hex Wrenches (AE #1655)
- Calipers or Precision Ruler
- FT 5.0mm Hex Drive (AE #1506)
- FT Nut Drivers (AE #1663-1668)
- Green Slime shock lube (AE #1105)

:: Notes

This symbol indicates a special note or instruction in the manual.

This symbol indicates a Racers Tip.

Scanning this QR code will take you to Team Associated's Tech Tips videos. These videos will help you with your build and setup!

There is a 1:1 hardware foldout page in the front of the manual. To check the size of a part, line up your hardware with the correct drawing until you find the exact size. Each part in the foldout has a number assigned to it for ordering replacement parts.

:: Shocks Build - Bag 9.1, 9.2 - Step 5

Kit Setup:
Mount the front shock in the outside hole on the front arm.

Kit Setup:
Mount the rear shock in the outside hole on the rear arm.

:: Battery Tray Build - Bag 10.1, 10.2 - Step 1

:: Battery Tray Build - Bag 10.1, 10.2 - Step 2

Install the ESC wire as shown first.
Then run the hook and loop straps
as shown.

:: Battery Tray Build - Bag 10.1, 10.2 - Step 3

:: Servo Horns / Linkage Build - Bag 11.1, 11.2 - Step 1

:: Servo Horns / Linkage Build - Bag 11.1, 11.2 - Step 2

:: Servo Horns / Linkage Build - Bag 11.1, 11.2 - Step 3

:: Wheels / Tires / Body - Misc. - Step 1

Build four
wheels/
tires

Tires:

When gluing tires to wheels, use a fast-curing tire glue [CA] [AE # 1597]. This is available at your local hobby shop. Make sure to clean the mounting surface of the tire and wheel with alcohol for best adhesion.

:: Wheels / Tires / Body - Misc. - Step 2

:: Wheels / Tires / Body - Misc. - Step 3

Painting Tips:

Your RC8BB3.1 Kit comes with a clear polycarbonate body. You will need to prep the body before you can paint it. Wash the inside thoroughly with warm water and liquid detergent. Dry the body using a clean, soft, lint-free cloth. Install the window masks on the inside of the body. (RC cars get painted from the inside). Using high quality masking tape, apply tape to the inside of the body to create a design. Spray (either rattle can or airbrush R/C specific paint) the paint to the inside of the body (preferably dark colors first, lighter colors last).

NOTE: use ONLY paint that is recommended for use with (polycarbonate) plastics. If you do not, you can destroy the polycarbonate body!!!

After painting, cut the body along the trim lines. Make sure to drill or use a body reamer to make the holes for the body mounts and antenna!

:: Droop Settings

Set droop by measuring overall length of shock (from standoff to shock pin) while the chassis is elevated above your working surface. The shocks should be fully extended.

Kit setup for front droop is 104mm shock length, and 120mm shock length for the rear.

If the shock length is too long, adjust by turning the droop screws clockwise.

If the shock length is too short, adjust by turning the droop screws counter-clockwise.

Front Droop: Increasing front droop (loosen droop screws) will increase off-throttle steering. It also allows the front end to lift more, giving more rear grip and less front grip on-power. Remember to never loosen the screws beyond the FULL DROOP setting. Decreasing front droop (tighten droop screws) yields more on-power steering and quicker response at the expense of some stability in bumpy sections. It will also give less off-throttle steering.

Rear Droop: Increasing rear droop (loosen droop screws) will increase traction in bumpy sections, but will reduce high-speed stability. Remember to never loosen the screws beyond the FULL DROOP setting. Decreasing rear droop (tighten droop screws) will increase stability in high speed sections, but will reduce stability in bumpy sections.

Setup Sheets:

Most often the best way to get your car handling right is to go to our website www.rc10.com and click on the "Setup Sheets" link, then the link to your vehicle, then search for your vehicle. Our team of professional drivers help develop these setups at National events. Also, most drivers have a "base" setup that they use as a starting point for every event. Try running some of our base setups OR look for track conditions and tires that are similar to your local track and mimic that setup. Remember, each adjustment has a purpose, so copy everything from the setup sheet and then make adjustments based on the recommendations in here at <http://www.rc10.com/rc/tuning>.
