For Immediate Release: February 11, 2016

The ALL NEW ESS-ONE+ Engine Sound System!
Available on RC10.com!

The ESS-ONE+ Engine Sound System lets you choose from multiple throaty race engine sounds, shifting, brakes, and turbo blowoff valves! The programmable ESS-ONE+ delivers these sounds in one simple, small box for a clean and easy installation. Whether you drive a short course truck, drift, F1, or rally car, the ESS-ONE+ has the right sound to match!

ESS-ONE+ uses an advanced DNS/DCR algorithm to reproduce the sound of real engines.
The sound is real-time calculated based on the throttle input + throttle movement speed + engine speed to closely simulate real engine sounds. This creates a richer sound than could be had through the throttle alone.

ESS-ONE+ supports the AUX channel which can simulate a variety of sounds.
Special sounds, like a car alarm and horn, can be independently controlled by a third channel on the transmitter. Please check HERE for a complete list of sounds available.

ESS-ONE+ supports fast switching between two sets of engine sounds.
Users can install two different sounds having different brake and acceleration settings into the ESS ONE+, and the sounds can be easily selected with the press of a button.

ESS-ONE+ supports firmware and function upgrades.
Sense Innovations supports the software-download services of RCPLUS to provide continuing firmware and software updates. Users will receive ongoing software upgrades.

Features:
- Plug and Play Audio device
- Universal fit
- USB updatability
- 100+ different engine sounds to choose from
- 30+ auxiliary sounds to choose from, such as horns, sirens, and turbo

Specifications:

Speaker unit size	3.9"L x 1.88"W x 1.35"H
Speaker unit weight	90.2g (3.18oz.)

UPC: 784695 292611	#29261	ESS-ONE+ Engine Sound System
