

For Immediate Release: January 30, 2023

## New! Parts for the RC10B74.2

### #92318 RC10B74.2 FT Ring and Pinion Gear Set, molded (above)

These gears reduce the rotational and overall weight of the RC10B74.2. Each set equates to a weight savings of 13.5g.

Made from high strength plastic with added durability through the use of a G10 strengthening ring and an aluminum pinion shaft, these gears have withstood a substantial amount of abuse in testing.

This set is intended for use with a center differential and a 13.5T motor. However, these have proven to hold up to modified power at the highest level of competition for those looking to save weight.

### #92365 RC10B74.2 FT Carbon Fiber Stiff Chassis Brace Support Set, 2.5mm

Includes both a front and rear carbon fiber chassis brace support in 2.5mm thickness. This set will decrease chassis flex for high grip situations where that is desired.

These have been updated from the previous version to allow clearance for the rear gearbox on the RC10B74.2.
