

For Immediate Release: May 3, 2019

New! Reedy Plus Hi-Torque Rotor

Reedy is proud to announce a hi-torque rotor option for the popular Sonic S-Plus Spec motor range. Because the rotor is produced using high-strength material, low-end torque and brake strength are improved with a reduction in fade during a race.

The #27415 Hi-Torque rotor comes balanced for smooth operation and is easily identified by the part number laser etched on the shaft and its distinctive blue ring.

Visit www.reedypower.com for a complete list of motors, replacement/option parts and detailed specifications.
