NEW!  **FT Graphite Rear Shock Tower, Tall**

#81422 RC8B3.1 FT Graphite Rear Shock Tower, tall.

Difference between new #91422 tower (gray) and standard tower (blue). Shock tower holes are higher.

We've raised the top shock mounting positions in our new graphite rear shock tower, resulting in a taller tower geometry.

Taller tower geometry increases up-travel. Up-travel is how much further the shock can travel upwards in its stroke after the chassis has bottomed out with the ground. Increasing up-travel lets the tire absorb more impact and improves handling in bumps and high-speed cornering.

After testing, Area 51 engineers found that by raising the existing shock locations by a specific amount, up-travel is optimized for both low and high axle positions.

For use on: RC8B3.1, RC8B3.1e.
