## New! RC10B74.1, B74.2 FT Vertical Ballstud Mount Set

New from Factory Team are Vertical Ballstud Mounts for the RC10B74 series cars, including the B74.2 and B74.2D. These vertical ballstud mounts increase the tunability of the rear camber link, allowing for lower ballstud positions to be used as well as a further outward ballstud position. These pieces mount directly to the tower included in the kit. See below for details regarding mounting and setup capabilities.

*Above left: #92323 RC10B74.1 FT Vertical Rear Ballstud Mount Set*

The intent of these mounts is to allow drivers more versatility than what is available on the kit tower, particularly regarding mounting the inner rear ballstud, which affects the roll center and camber gain of the car. The extent of the available adjustment range will depend on multiple factors such as differential height, hub height, link length, and more.

*Left: Vertical ballstud mounted on a car at lower position of rear tower, mount's outer hole*

The chart below shows the number of washers needed above the ballstud to match the vertical height of the positions available on the kit tower. N/A indicates positions that cannot be achieved with the Vertical Ballstud Mounts installed.

	Current Tower Position	Inner Hole on Vertical Mount	Outer Hole on Vertical Mount
	upper	N/A	N/A
	middle	N/A (interference with ball cup)	0mm Washers
	lower	2.5mm washers	2.5mm washers

*It is important to check that the camber links and ball cups are clear from interference with the outdrives, dog bones, and anti-roll bar before running the car with these lower positions.*

**See next page for catalog information**

## RC10B74.1, B74.2 FT Vertical Ballstud Mount Set

UPC	Part No.	Description	MAP	MSRP	Available
