

For Immediate Release: December 7, 2020

NEW! Reedy RC4020A HV Digital Competition Crawler Servo

Reedy's RC4020A HV Digital Competition Crawler Servo is trail-tested and engineered for use in competition-level trail trucks, crawlers, and monster trucks. A powerful motor creates incredible torque without sacrificing speed, while an advanced microprocessor provides precision steering control.

An all-metal gear set is designed for strength and durability while a CNC-machined full-aluminum case reduces operating temperatures for fade-free operation. Because the RC4020A features HV 8.4V compatibility, external BEC units can be utilized to create an incredible 50 kg-cm (695 in-oz) of torque.

Thanks to its impressive list of features, Reedy's HV Digital Competition Crawler Servo is the logical choice for crawler, trail truck, and monster truck enthusiasts of all skill levels.

Features

- Full aluminum case
- High-torque brushless motor
- Waterproof construction
- Ultra-precise metal gears
- Dual ball bearings
- High-voltage compatible

Specifications

Feature		Specification
Input (V)		4.8 – 8.4
Motor		Brushless
Speed (sec/60°)	6.0V	.150
	7.4V	.135
	8.4V	.12
Torque (kg-cm/in-oz)	6.0V	37/514
	7.4V	44/612
	8.4V	50/695
Dimensions (mm)		40x20x37.5
Weight (g)		82
Spline		25
