New! Reedy Zappers SG6 Competition HV-LiPo Batteries

Reedy's Zappers SG6 HV-LiPo batteries incorporate new advancements in cell manufacturing and battery construction to improve power output, lower internal resistance, and increase durability. Reedy strives to improve all aspects of battery performance in the increasingly competitive world of R/C car racing.

Zappers SG6 HV-LiPo batteries feature a 3.8V/cell nominal voltage which means that the battery can be safely charged to 4.35V/cell. This can be useful in applications such as 1:8 eBuggy where maximum power output and run time are critical. Even when the typical 8.40-8.44V (4.2-4.22V/cell) charging limit is enforced, the SG6's inherently flat discharge curve results in higher voltage deeper into the race and more consistent power output from start to finish.

Zappers SG6 batteries are available in nine configurations for a variety of on-road and off-road applications. A high quality, durable hard case helps prevent damage while embedded socket connectors keep power robbing resistance to a minimum. Male ESC connectors are included!

LiPo battery technology continues to evolve and Reedy is committed to bringing improved performance to the masses.

Features

- State-of-the-art LiPo chemistry
- Updated formulation and construction
- Heavy-duty internal construction
- High capacity
- Reduced IR with elevated average voltage
- Proven reliability and cycle-life
- Durable hard case with low-resistance connectors
- Built to ROAR/EFRA/BRCA/IFMAR specification
